## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-17 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent Number 6,624,868 to Terukina et al (hereinafter Terukina).

Terukina discloses in figures 1-4, an active matrix display and method of making comprising:

- An array of pixels (3) provided over a common substrate (COG), each pixel comprising a display element (52) and a switching device (each transistor is controlled and switched to turn on accordingly) and the array of pixels defining a display area and the pixels being formed from a plurality of thin film layers (thin film transistors TFTs disclosed);
- Column driver circuitry (6);
- Row driver circuitry (11);
- Wherein the display further comprises at least one conductor line (12) extending along an edge of the display over the common substrate and outside the display area.

As to claims 2 and 5-7, an integrated circuit is provided on a flexible printed circuit.

Art Unit: 2883

As to claim 3, the row and column drivers are disclosed as claimed.

As to claim 4, the conductor line (12) is parallel to a side edge of the display.

As to claim 8, at least one conductor line is formed over a support defined by the TFT (figure 1).

As to claim 9, the line is on a printed circuit board.

As to claim 10, a power supply line would be inherent to power the TFTs.

As to claim 11, a TFT would have a capacitance portion.
